

Steps

Requirements

1. Python Requirements:

```
pip install -r ui/requirements.txt
```

2. Download PyTorch that is compatible with your system: <https://pytorch.org/get-started/locally/>

3. Download pretrained ZSCL model and place in the ./backend/models folder:

https://drive.google.com/drive/folders/1aw9PT39Sbjg6zdcNT9kvbf5y-0k_HSCE?usp=sharing

Download node.js

<https://nodejs.org/en/download>

Install frontend packages

From the parent directory:

```
npm install --prefix ./frontend/
```

Running

Frontend

Build the frontend UI: From the parent directory:

```
npm run build --prefix ./frontend/
```

backend

Run the server starting from the parent directory of this repository:

```
python -m uvicorn backend.backend:app --reload
```

or

```
uvicorn backend.backend:app --reload
```

Run frontend only:

```
npm --prefix ./frontend run dev
```
